ABOUT US

UnitedYou Ventures is an innovative and service oriented energy and Infrastructure Consultancy Company serving clientele in Middle East, Africa and CIS Countries. We provide management and technical consultancy services for Oil& Gas, Renewable Energy, Power Plants and Infrastructure projects using emerging technologies and technical expertise. Through our unparalleled expert input on projects, we are capable of offering solutions to achieve desired deliverables.

UnitedYou stands as a trusted partner that provides streamlined solutions which leverage on quality proven methods, technical expertise, and tailor-made solutions. The team is trust worthy and experienced to accurately and efficiently fulfill clients' expectations. We are proficient in controlling the most challenging task to ensure optimal performance which is tailored towards the desired outputs.

“We provide management and technical consultancy services.”

VISION & MISSION

VISION

To become the leading consulting company and partner of choice by consistently delivering high quality solutions that meet international standards.

MISSION

We are committed to maximising our client's business potential through innovative solutions centred around on-time delivery and integrity.

OUR SERVICES

As management and technical consultants in the energy and infrastructure sector, our services cover a range of activities from executive search, business support and specialized technical services.

Executive Search & Placement Services

UnitedYou is specialized in talent sourcing for Oil & Gas, Power and infrastructure industries. As a trusted partner, we tailor our methods to suit the varying requirements ranging from short term to long term. Our strong portfolio of Subject Matter Experts (SME) across different industries we specialize in, give our clients a technical edge by hiring experienced consultants to handle assignments.

We network with technical professionals at all levels from the industry.

- Executive Management
- Project Management
- Construction, Commissioning & Operations
- Contracts & Subcontracts
- Project Controls & Planning
- Safety, Health and Environment
- Quality Assurance & Quality Control
- Procurement & Logistics
- Exploration & Production
- Operations & Maintenance
- Engineering (Onshore & Offshore) – Process, HSE, Piping, Pipelines, Electrical, Instrumentation, Telecom, Rotary, Static, HVAC, Civil & Structural, Metallurgy & Corrosion
- Business Development & Proposals
- Business Support – Human Resources, Finance, Information Technology

Business Support Services

We are dedicated to helping our clients build business strategies based on industry insights and regional knowledge of energy and infrastructure industries. Our specialized consulting services provide tailored solutions to clients seeking business development opportunities, market representation, strategic alliances and formulating business development proposals and contracts.

Commercial Management

The evolving technologies, competitor strategies and market behaviors impact the project from commercial perspective. Project outcomes can be positively influenced with inception of specialists who can charter the right commercial direction to be adopted. Our commercial services can support you with contracting strategy, negotiation support, claims, dispute management and subcontracts strategy engineering.

Project, Construction and Commissioning Management

Success of the project is dependent on the resources assigned and the project management strategy adopted. Our tailor-made solutions span from the development stages of engineering and management during execution phase including construction and commissioning. Our team of experts with in-depth market knowledge and technical expertise can design the overall project execution strategy including constructability studies, construction and commissioning support.

Supply Chain Management

Procurement and supply chain is a critical activity and major stream of revenue, which, if not harnessed, can impact the project delivery and also erode the profits. As a strategy partner, we can assist in understanding your supply chain process and provide guidance in budget design, setting targets, sourcing strategies, defining and operating the plan for your projects including preparation of techno-commercial specifications & analyzing vendor quotations.

Freight and Logistics Management

Freight and logistics is an integral part of supply chain to support the project execution. Our sector specialists with deep understanding of the key business challenges provide turnkey project cargo solutions including multi model transport solutions and engineering study to suit project requirements.

Health & Safety Management

Health and safety requirements should be identified to manage the risks associated with it. If not managed through industry standards and practices, it can lead to project delays resulting from loss time injury rates and increase in costs. As a comprehensive tailor-made package, we support projects with process safety management, process hazards analysis, HAZOP, QRA, hazardous area classification, emergency response, disaster management plans and safety audits.

Quality Assurance & Quality Control Management

The quality of delivery on projects is driven by the standards, processes and procedures adopted and adhered to during the entire life cycle of the projects. We support the projects with quality assurance and control services to align with contractual specifications, standard regulations imposed by authorities, quality standards and compliance. The services include defining quality assurance programs, review of design and specifications, inspection and factory acceptance tests of installations and equipment, audit of processes, procedures and standards being used.

Detail Engineering & Drafting (Onshore & Offshore)

Engineering being the critical phase of any project, we offer specialized services ranging from overall engineering management, conceptual studies, FEED and detail engineering across all disciplines with trouble shooting and system optimization studies. We are able to provide integrated solutions with the best technical expertise coupled with latest technologies. We offer detail engineering and drafting for onshore and offshore projects specializing in process, safety design, piping, pipelines, electrical, instrumentation, telecom, civil & structural, metallurgy & corrosion, rotary & static equipment and HVAC.
